

Coronavirus (COVID-19) Response

If an adult/child develops any of the main symptoms of Coronavirus

- a high temperature – in a child above 38°,
- a new, continuous cough – this means coughing a lot for more than an hour, or 3 or more coughing episodes in 24 hours
- a loss or change to your sense of smell or taste

Please check latest **NHS guidance** for symptoms

If an adult/child is contacted by NHS test and trace system

(having been in contact with someone who has tested positive for Coronavirus)

Adult/child must isolate for 14 days from day of last contact – **this does not include household members**

If adult/child develops Coronavirus symptoms other household members must isolate for 14 days from first day of symptoms

A test should only be booked once symptoms start

Adult/child must self-isolate, along with all family members living in the same household.
A test should be booked immediately (call **119** or website: www.nhs.uk) for the person with the symptoms

If test is **positive**, adult/child must isolate for 10 days, other household members must also self-isolate for 14 days from first day of symptoms.
(If another person in the house develops symptoms, the self-isolation period starts again for other household members)

If test is **negative**, there is no further need for isolation for the adult/child or other household members. **Child can return to school.** (as long as everyone feels fit and well).

If test is **positive**, adult/child must isolate for 10 days, other household members must also self-isolate for 14 days from first day of symptoms.
(If another person in the house develops symptoms, the self-isolation period starts again for other household members)

If test is **negative**, adult/child must **still isolate for 14 days**, but household members no longer need to self-isolate (unless they develop symptoms)

Adult/child must share contacts with NHS test and trace
